

Conditions for accepting offers in OrganicXseeds-NL

The offers on OXS-NL are meant for professional biological cultivation. Thus, your offers as supplier need to be suitable for Dutch growing conditions. The offer must be available in large packaging or in numbers (e.g. trees, plants) suitable for professional cultivation. Offers and packaging intended for consumers will not be accepted.

It is important that you state a name and phone number of a contact who is able to communicate with farmers in either Dutch or English.

Checking of the offers

Naktuinbouw checks the offers before they will be visible on the OXS-NL database. This check contains the following criteria:

Naming

1. The listing of varieties of vegetable and agricultural crops and fruit crops in the EU COMMON CATALOGUES or FRUMATIS will be checked. A variety cannot be marketed if it is not listed in these lists under the concerned crop.
2. The spelling of the variety name must be identical to the name in these lists. Extra additions that refer to the method of propagation (e.g. F1) or company names (except when it is part of the official name) cannot be part of this name.
3. Exemption regarding point 1: varieties still in procedure for listing and which are not yet admitted, can be marketed in the EU if permission has been granted by one of its members.
4. In the case of fruit varieties the name cannot consist only of a brand name. The name of the listed variety should always be mentioned.
5. Attention should be paid to using the right crop and sub-crop. Sub-crops may differ between countries using the OXS database.
6. These criteria for names are not applicable to varieties of crops not listed on the EU COMMON CATALOGUES or FRUMATIS. You are free to fill in a variety name.

Mixtures

7. For mixtures, there are no naming criteria. A free name or brand name may be used. Behind the name the use of the mixture must be mentioned, see point 9.
8. Any mixture that you want to offer on the OXS database has to consist of 100% biological seeds.
9. Mixtures may have different uses, for example: pasture mixtures (weidemengsel), green manure mixtures (groenbemestingsmengsels) or wild field mixtures (natuurakkermengsels). Following the name of your offer the use must be mentioned.
10. The composition of the mixtures must be mentioned in the delivery information, including crop names and percentages.

If there are any remarks about the offer Naktuinbouw will contact you, requesting you to change the data of your offer.
